## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. The term "monometers" appears incorrect.
4. Claims are to be in sentence form in that they begin capitalized and end with a period.
5. The use of parentheticals renders the claims unclear. How do the terms or letters within the parentheses further limit the claims?

### ***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 1713

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagiwara et al. US 6,878,766.

9. This patent shows dip-formed articles formed from emulsion compositions, see column 9, lines 25+. The methods described in the examples of the patent are seen to possess the same steps as those claimed, see columns 6-8 and example1. The only difference between the claimed invention and the disclosure of the patent is the specific use of the isoprene monomer. The patent calls for the use of a conjugated diene monomer. The patent identifies conjugated diene monomers at column 2, lines 60+. Here 1,3-diene is identified along with isoprene. The examples use the butadiene species of conjugated diene monomer. As such, there is no anticipatory teaching in this patent. The claimed invention is obvious because the use of isoprene is specifically mentioned. One of ordinary skill would be motivated to select the isoprene monomer from the monomers listed because it is specifically mentioned and one of ordinary skill in the art would have a reasonable expectation of success when doing so.
